Component of FLEXA body Braccio Parts extended braccio M~= Braccio Motor Self-Printing or Apply with other Braccio sets The number of Braccio's M1 > arm parts are increased and extend the legs of the Braccio. Space under the desk Arduino Uno Input & Output of FLEXA Braccio shield FLEXA runs away from the people's accession by detecting the proximity following the value of capacitive sensors. Once it is touched by people, it squeezes to defend itself.

Component of FLEXA skin Spandex Powder beads capacitive sensor sheets (Polyurethane elastic fiber) ×10 $\times 2$ -sensor The extended Braccio is braccio parts covered with the One on One Polyurethene elastic fiber with powder beads. Capacitive sensor sheets are over layered on the polyurethane elastic fiber. The Braccio is covered with the two identical bags. M5 M4 М3 The powder beads are in M2 the bag consisted to

sensors and fibers. Then,

the bag is closed.
